

NASA's Marshall Space Flight Center Awards Advanced Security Camera Contract To Columbia-Based A3 Communications

The National Aeronautics and Space Administration (NASA)'s George C. Marshall Space Flight Center of Huntsville, Alabama recently awarded Columbia, South Carolina-based A3 Communications, Inc. with a sole source contract for the acquisition and configuration of 10 high definition Axis video cameras along with the coordinating hardware and video management software.

A3 Communications regularly provides similar products and services to commercial and public clients across the Southeast, but was recently recognized by NASA as "uniquely qualified" to fulfill the statement of work. So much so, that A3 was awarded a sole source contract, meaning the government had sufficient capability information to award the contract on a non-competitive basis.

"We are absolutely thrilled to be working with NASA and to provide the government with top-of-the-line cameras and technology," said Joe Thomas, Chief Executive Officer of A3 Communications.

The Axis cameras being provided to NASA are state-of-the-art, including features such as: high definition video; multiple video streams; remote focus and zoom; strong exterior casings designed for extreme temperatures and elements; sleek design and power over Ethernet.

To discuss surveillance options for your company, or to find out more about how A3 Communications can implement advanced technology and communication systems into your office, contact the sales staff by calling (803) 744-5000.
